Professional Summary

Results-driven Software Engineering undergraduate with 4+ years of technical background and 1 year of professional industry experience. Specialized in Android/iOS mobile development, scalable backend architecture, and cloud integrations. Adept at thriving in Agile environments, leveraging strong problem-solving skills to deliver high-quality, user-centric applications.

Work Experience

TRAINEE SOFTWARE ENGINEER | APPLOVA INC. (HSENIID MOBILE SOLUTIONS)

Jul 2024 – Jun 2025

Worked within the Integration Team of Applova to develop and enhance full-stack features for Applova's digital ordering suite, including Android POS system, Merchant and Admin Web portals, and Kitchen Display Systems serving the U.S. food and beverage industry. Contributed to the complete software development life cycle within an Agile environment, using tools such as Jira, Git, Docker, and CI/CD pipelines.

Key Achievements:

- **AI Recommendation Feature on POS:** Implemented new UIs and logical handling for the AI recommendation feature across both the Android app and customer-facing screens.
- **Merchant Web Payment Integration:** Researched and Integrated the Braintree SDK into the Merchant Web platform with full frontend and backend implementation to securely process credit and debit card transactions, manage token generation, and securely handle nonce tokens.
- **Backend & API Integration:** Developed scalable RESTful APIs using Spring Boot and Java to handle complex database transactions with MongoDB, supporting core platform features and optimizing legacy codebases
- **UI & System Enhancements:** Delivered impactful frontend improvements, including a new portrait mode UI for customer profiles, a revamped POS printer configuration flow, and an alternate name display feature for the Applova Kitchen Display System (KDS).
- **System Automation:** Designed and implemented automated email notification triggers for Merchant Web operations, including secure alerts for card additions and expiry reminders
- **Applova POS Customer Screen Revamp:** Integrated new business logic and custom UIs for the Android POS system's customer-facing screens to enhance the existing user flow.

Education

BENG.(HONS) SOFTWARE ENGINEERING (READING) | UNIVERSITY OF WESTMINSTER, UK

2022 - Present

Level 5: Passed with 120 credits (Average – 80.3%),

- Object-Oriented Programming
- Database Systems
- Software Development Group Project
- Algorithms: Theory, Design and Implementation
- Software Engineering Principles and Practice
- Mobile Application Development (Android Dev)

Level 6: 6 modules - 120 credits at level 6 (Reading)

- Formal Methods -70
- Concurrent Programming - 75.5
- Mobile Native Development(IOS Dev) – 80.5
- Final Year Project
- Cyber Security

EDEXCEL UK COMPUTER COURSE | GATEWAY COLLEGE, COLOMBO

2015 - 2018

Year 7, Year 8

PRIMARY & SECONDARY EDUCATION | RICHMOND COLLEGE, GALLE

2008 - 2022

G.C.E A/L 2021(2022) - Physical Science Stream

Competitions

- 1st Place - COFAS International Computer Olympiad 2016 Organized by CMS, India.
- Participant - Design IX23(UI-UX Competition), CodeSprint 8 organized by IEEE branch of IIT.
- Participant - Mora UXplore 2.0, UI-UX Competition organized by University of Moratuwa.
- Participant - Idealize, Mobile App and Web development Competition organized by AISEC In University of Moratuwa.
- Participant - Aquathon 2023.
- Participant - Designathon Challenge Organized by ROOTCODE.
- Participant - hackX 2023 Organized by University of Kelaniya.

Projects

- **"SmartScale" AI-Driven Proactive Auto-Scaling System** (Technologies: Python, AWS Lambda, ECS, Docker, Streamlit)
Researched and developed a serverless machine learning pipeline featuring AI-driven proactive auto-scaling for my final year project. Engineered a dual-AI approach using an Architecture Profiler (MLP) for optimal RAM sizing and a Resource Optimizer (LSTM) for accurate traffic forecasting. Integrated cloud operations using Boto3 to manage AWS Lambda concurrency via a "Sense-Think-Act" loop and deployed the management system using Docker and AWS ECS with Streamlit frontend.
- **Merchant Web Payment Integration System** (Technologies: Java, Spring Boot, JSP, MongoDB, Braintree SDK)
Integrated the Braintree SDK into the Applova Merchant Web platform to securely process credit and debit card transactions. Developed full-stack features including backend APIs using Spring Boot, MongoDB database integration for card management, and dynamic JSP frontend pages. Engineered the secure handling of sensitive card information, nonce tokens, and end-to-end validation
- **"SmartPicks" Applova POS AI Product Recommendation** (Technologies: Java, Android)
Developed frontend interfaces and logics for both the cashier-facing and customer-facing screens for recommended products
- **iOS Real-Time Weather Application** (Technologies: Swift, iOS, REST APIs)
Developed a native iOS mobile application using Swift to display real-time weather conditions and forecasts for multiple geographical locations. Integrated the OpenWeather API to seamlessly fetch, parse, and display live meteorological data, focusing on creating a responsive and intuitive user interface for location-based weather tracking.
- **Android Flag Quiz App.** (Technologies: Kotlin)
Developed a flag quiz game for an Android application with Kotlin and Jetpack Compose using Android Studio. The app allows users to test their knowledge of country flags through various interactive game modes.
- **"Med Vault" Medicine Spotter with Digital Prescription App** (Technologies: Flutter, Node.js & MongoDB, Python)
Developed a mobile application for the software development group project using Flutter, Node.js, and MongoDB. The app locates the nearest pharmacy with real-time stock updates based on patients' requirements. Additionally, it incorporates a machine learning model for suggesting alternative medicines and provides digital prescriptions for consultants.

Certificates

- LinkedIn Learning Certificate of JavaScript Essential Training
- LinkedIn Learning Certificate of Figma for UX Design by Eric Nordquist
- Participant - API Development and Postman Hands-on Learning workshop at Fidenz Academy
- GIT101 - GitHub workshop organized by Mozilla Club of IIT
- Participant - AI-Driven Sri Lanka bootcamp series

Clubs & Societies

- Member of Leo Club, IEEE Computer Society, Mozilla club of IIT(Present)
- Past Member of Sri Lanka Scout Association (2011-2017)
- Past Prefect of Richmond College & Member of Richmond College IT Society, Photographic Society, Western Choir
- Past Member of Mother SRI LANKA Society (2013-2017)

Skills

- **Languages:** Java, Kotlin, Python, Swift, Dart, JavaScript, HTML, CSS, SQL.
- **Frameworks & Libraries :** Spring Boot , Angular, Node.js , React , Flutter, JSP , Braintree SDK , JavaFX, PyTorch, Boto3.
- **API Development:** REST APIs, WebSockets
- **DevOps & Deployment:** Docker, Nginx, GCP, GitHub Actions, Streamlit, AWS ECS
- **CI/CD:** Docker, GitHub Actions, Automation Scripts
- **Cloud & Storage :** AWS S3, GCP
- **Databases:** MongoDB, SQL.
